Executive Summary: Air Quality in Our Area

The following Annual Progress Report (APR) was prepared and written by Bureau Veritas on behalf of Moray Council in accordance with Local Air Quality Management (LAQM) Technical Guidance (TG(22)), published by Defra on behalf of the devolved administrations.

Air Quality in Moray Council

There are no existing significant air quality issues identified within the Moray Council administrative area. The Council has examined the 2024 air quality monitoring results in its area and concludes that no new Detailed Assessments or Air Quality Management Areas (AQMAs) are required for any pollutant.

Atmospheric nitrogen dioxide (NO₂) is currently the only pollutant of concern within the Moray Council area and is monitored in urban areas via a network of passive diffusion tubes. The measured 2024 annual mean concentrations of NO₂ within the Moray Council area remain well below the Air Quality Standards (AQS) set by the Scottish Government. In summary, a maximum measured annual mean NO₂ concentration of 14.7 μ g/m³ was monitored at West Park Court, Elgin 1 (monitoring site DT1), well below the annual mean NO₂ Scottish Air Quality Standard of 40 μ g/m³. This was a decrease of approximately 2.0 μ g/m³ when compared to the 2023 monitoring results at the same site. Measured 2023 annual mean NO₂ concentrations show a decrease compared to the 2023 results at 18 out of the 19 monitoring locations.

All sources of emissions from industry and transport remain unchanged from those reported in the 2024 APR.

Actions to Improve Air Quality

Although there are currently no designated AQMAs within the Moray Council area and thus, no specific planned actions to implement air quality improvement measures, Moray Council is addressing air quality through local policies and plans and works to manage local air quality through a monitoring network within the Council area.

Moray council continue to actively utilise the 'Moray Council Active Travel Strategy', updated and adopted on 15th November 2022. The Moray Council Active Travel Strategy covers 2022-2027 and sets out how Moray Council will encourage more non-motorised travel within Moray through a series of programmes of direct measures and behaviour change programmes. The plan embeds the ethos that Active Travel has many benefits to both communities and individuals and has a number of positive outcomes for public health, social inclusion, reducing the environmental impact of transport and for supporting local economic activity. More information on the strategy can be found at:

http://www.moray.gov.uk/moray standard/page 75724.html

The Elgin Transport Strategy was adopted in August 2017 and develops ways to help people become more active, walking and cycling more often, and promotes more use of public transport. The policy has developed for the Elgin area within Moray Council. The policy aims to achieve its transport goals over a 13-year period through improvements to the transport network, promotion of public transport and contribution to review of the Moray Local Development Plan.

The Zero Emission Fleet Replacement Strategy details the council's plans to decarbonise the remainder of the fleet in line with the Scottish Government's net zero targets. Progress on this measure has been slower than expected due to the slowing in the global EV market alongside limited funding within Moray Council.

During 2025, the pathfinder project has been initiated. This includes an awarded contract for a single contractor to install more EV charging points through Moray to encourage EV uptake. At the time of writing the works are yet to be completed, however the project is due to go live towards the end of 2025.

Local Priorities and Challenges

Moray Council has no specific priorities for the coming year for the improvement of air quality in its area but will continue monitoring at the existing diffusion tube sites in the area to identify any future changes in pollution concentrations.

How to Get Involved

Members of the public can contribute to improving local air quality by taking alternative modes of transport where possible, becoming part of a cycle to work scheme, walking short distances instead of driving and when driving is unavoidable, taking part in car sharing schemes. Detailed information on local transport and links to major travel means can be found at:

www.moray.gov.uk/moray standard/page 1677.html

If you have any concerns or require further information on air quality, please contact Environmental Health or visit the Moray Council website at www.moray.gov.uk and search for "air quality".

The previous LAQM reporting, including the 2023 APR, is available on the Moray Council website at: www.moray.gov.uk/moray standard/page 1790.html.

1 Local Air Quality Management

This report provides an overview of air quality in Moray Council during 2024. It fulfils the requirements of Local Air Quality Management (LAQM) as set out in Part IV of the Environment Act (1995), as amended by the Environment Act (2021), and the relevant Policy and Technical Guidance documents.

The LAQM process places an obligation on all local authorities to regularly review and assess air quality in their areas, and to determine whether or not the air quality objectives are likely to be achieved. Where an exceedance is considered likely the local authority must declare an Air Quality Management Area (AQMA) and prepare an Air Quality Action Plan (AQAP) setting out the measures it intends to put in place in pursuit of the objectives. This Annual Progress Report (APR) summarises the work being undertaken by Moray Council to improve air quality and any progress that has been made.

Table 1.1 – Summary of Air Quality Objectives in Scotland

Pollutant	Air Quality Objective Concentration	Air Quality Objective Measured as	Date to be Achieved by
Nitrogen dioxide (NO ₂)	200 μg/m³ not to be exceeded more than 18 times a year	1-hour mean	31.12.2005
Nitrogen dioxide (NO ₂)	40 μg/m ³	Annual mean	31.12.2005
Particulate Matter (PM ₁₀)	50 μg/m³, not to be exceeded more than 7 times a year	24-hour mean	31.12.2010
Particulate Matter (PM ₁₀)	18 μg/m³	Annual mean	31.12.2010
Particulate Matter (PM _{2.5})	10 μg/m³	Annual mean	31.12.2021
Sulphur dioxide (SO ₂)	350 μg/m³, not to be exceeded more than 24 times a year	1-hour mean	31.12.2004
Sulphur dioxide (SO ₂)	125 μg/m³, not to be exceeded more than 3 times a year	24-hour mean	31.12.2004
Sulphur dioxide (SO ₂)	266 μg/m³, not to be exceeded more than 35 times a year	15-minute mean	31.12.2005
Benzene	3.25 μg/m ³	Running annual mean	31.12.2010
1,3 Butadiene	2.25 μg/m³	Running annual mean	31.12.2003
Carbon Monoxide	10.0 mg/m ³	Running 8-Hour mean	31.12.2003

2 Actions to Improve Air Quality

2.1 Air Quality Management Areas

Air Quality Management Areas (AQMAs) are declared when there is an exceedance or likely exceedance of an air quality objective. After declaration, the authority must prepare publish and implement an Air Quality Action Plan (AQAP) within the shortest possible time and no later than 12 months of the date of AQMA Designation Order. The AQAP must set out measures the local authority intends to put in place in pursuit of the objectives within the shortest possible time Measures should be provided with milestones and a final date for completion. The action plan itself should have a timescale for completion and for revocation of the AQMA. Where measures to reduce air pollution may require a longer timescale an action plan shall be reviewed and republished within five years of initial publication and then five-yearly thereafter.

Moray Council currently does not have any AQMAs.

2.2 Implementation of Air Quality Action Plan(s) and/or measures to address air quality

In order to ensure that local authorities implement the measures within an action plan by the timescales stated within that plan, the Scottish Government expects authorities to submit updates on progress through the APR process. Moray Council has continued to progress a number of measures during the current reporting year of 2024 in pursuit of improving local air quality and meeting the air quality objectives within the shortest possible time. Details of all measures completed, in progress or planned are set out in

Table 2.1.

Moray Council continues to adopt the Active Travel Strategy (2022-2027), the main objectives are outlined below:

- 1. Further develop the Active Travel network.
- 2. Develop Active Travel Masterplans for key settlements in Moray.
- 3. Embed Active Travel opportunities within new developments.

- 4. Encourage and facilitate walking and cycling as leisure and tourist activities to provide benefits to health and local economy.
- 5. Provide new/improved cycle parking/ facilities at key destinations and transport interchanges in Moray.
- 6. Work with local employers (including Moray Council) and their staff to encourage more walking and cycling to and from work.
- 7. Work with students and school pupils, staff and parents to encourage more walking, cycling and scooting to and from school/ further education.
- 8. Continue to seek funding from existing sources and Identify new funding opportunities as they emerge to secure funding for Active Travel interventions, as appropriate.

The council's fleet is used by employees to conduct council business and deliver services for the people of Moray. It comprises over 500 cars, vans, buses, trucks, specialist vehicles and vessels. The Zero Emission Fleet Replacement Strategy details the council's plans to decarbonise the remainder of the fleet in line with the Scottish Government's net zero targets. Progress on this measure has been slower than expected due to the slowing in the global EV market alongside limited funding within Moray Council.

The Pathfinder Project has three key objectives which align with Moray Council's approach to the provision of publicly available charging infrastructure:

- Community Wealth Building, Community Benefits and Economic Social Governance including training and the development of local supply chains for repairs and servicing;
- Net Zero Journey, ensuring operations and expansion support a Just Transition;
 and
- Commercial development, retaining an interest in the existing and future sites, but
 with a fair share of any profit coming back to the Councils, including a share of any
 new revenue streams other than charging in the future.

While works on this measure are yet to start, it is expected that works will go live towards the end of 2025.

Table 2.1 – Progress on Measures to Improve Air Quality

Measure No.	Measure	Category	Expec ted/ Actual Comp letion year	Organis ations Involved	Measure Status	Funding Status	Key Miles tones	Progress	Barriers to implementation
1	Active Travel Strategy	Policy guidance and developm ent control	N/A	Moray Council	In Progress	Partially Funded	N/A	Further development to the Active Travel network.	None
2	Council Fleet Decarbon isation	Vehicle fleet efficiency	N/A	Moray Council	In Progress	Partially Funded	N/A	Electric pool cars are now available for council staff to use for work visits.	Difficulties in the global vehicle market has led to a slowdown in the availability of electric vehicles for the council's planned fleet replacement programme.
3	Pathfinde r Project	Promotin g low emission transport	N/A	Moray Council	In Progress	Partially Funded	Contract awarded to install N/A EV charging points through Moray.		None

3 Air Quality Monitoring Data and Comparison with Air Quality Objectives

3.1 Summary of Monitoring Undertaken

3.1.1 Automatic Monitoring Sites

This section sets out what monitoring has taken place and how local concentrations of the main air pollutants compare with the objectives.

Moray Council does not undertake any automatic (continuous) monitoring within the local authority's area.

3.1.2 Non-Automatic Monitoring Sites

Moray Council undertook non-automatic (passive) monitoring of NO₂ at 19 sites during 2024. Table A.1 in Appendix A shows the details of the sites.

Maps showing the location of the monitoring sites are provided in Appendix D.

Further details on Quality Assurance/Quality Control (QA/QC) and bias adjustment for the diffusion tubes are included in Appendix C.

3.1.3 Other Monitoring Activities

No additional monitoring activities were undertaken by Moray Council in 2024.

3.2 Individual Pollutants

The air quality monitoring results presented in this section are, where relevant, adjusted for annualisation and bias. Further details on adjustments are provided in Appendix C.

3.2.1 Nitrogen Dioxide (NO₂)

Table A.4 in Appendix A compares the adjusted monitored NO₂ annual mean concentrations for the past five years with the air quality objective of 40 μg/m³ at non-automatic monitoring sites. In summary, a maximum measured annual mean NO₂

concentration of 14.7 μ g/m³ was monitored at West Park Court, Elgin 1 (monitoring site DT1), well below the annual mean NO₂ Scottish Air Quality Standard of 40 μ g/m³. This was a decrease of approximately 2.0 μ g/m³ when compared to the 2023 monitoring results at the same site. Measured 2023 annual mean NO₂ concentrations show a decrease compared to the 2023 results at 18 out of the 19 monitoring locations.

For diffusion tubes, the full 2024 dataset of monthly mean values is provided in Appendix B.

No automatic monitoring has been undertaken within Moray Council's area of jurisdiction, and so it is not possible to directly compare the measured data to the 1-hour mean air quality objective. A proxy value of 60 μg/m³ has been utilised to identify any potential exceedences of the 1-hour mean objective. Analysis of long-term monitoring data suggests that if a measured annual mean NO₂ concentration is less than 60 μg/m³ then the 1-hour mean NO₂ ojective is likely to be met in accordance with LAQM.TG(22) (Ref-5). There are no monitored NO₂ annual average concentrations of 60 μg/m³ or greater within Moray Council within 2024.

3.2.2 Particulate Matter (PM₁₀)

Moray Council does not undertake any monitoring for PM₁₀ and does not expect PM₁₀ concentrations to exceed AQS(S) objectives.

3.2.3 Particulate Matter (PM_{2.5})

Moray Council did not undertake PM_{2.5} monitoring during 2024 and has no current future plans to undertake such. It is not anticipated that PM_{2.5} concentrations within Moray Council exceed the relative air quality objective.

3.2.4 Sulphur Dioxide (SO₂)

Sulphur dioxide is not monitored within the Moray Council area. It is not expected that existing SO₂ emissions will cause SO₂ objectives to be exceeded.

3.2.5 Carbon Monoxide, Lead and 1,3-Butadiene

There is no monitoring of carbon monoxide, lead or 1,3-Butadiene within the Moray Council area. It is not expected that existing emissions of carbon monoxide, lead or 1,3-Butadiene will exceed the AQS(S) objectives.

4 New Local Developments

4.1 Road Traffic Sources

There have been no new planning applications for local developments of road traffic sources in 2024.

4.2 Other Transport Sources

There have been no planning applications for local developments of other transport sources in 2024.

4.3 Industrial Sources

There have been no planning applications for local developments of industrial sources in 2024.

4.4 Commercial and Domestic Sources

There have been no planning applications for local developments of commercial or domestic sources in 2024.

4.5 New Developments with Fugitive or Uncontrolled Sources

There have been no planning applications for local developments with fugitive or uncontrolled sources in 2024.

5 Planning Applications

24/00617/EIA - Land At Cairds Wood Moray

This application refers to the creation of a modest wind farm, which will form an extension to the operational Edintore Wind Farm. The Proposed Development site is located approximately 2km to the south of the settlement of Keith, Moray. Construction vehicle exhaust emissions will be limited to the construction and decommissioning phases of the development lifespan. Given the site location, adjacent to the main A96 arterial roadway, it is not expected that the modest increase in vehicle movements will have any impact on the current level of air quality in the local area. Given the limited potential impacts on the local air quality associated with dust and vehicle emissions during the construction and decommissioning phases of the development, it is anticipated that potential effects on Air Quality will be **not significant**.

25/00203/EIA - Land South Of Marypark Ballindalloch Moray

This application refers to the construction of a 70 MWe electrolytic hydrogen production facility and associated ancillary infrastructure including water supply and wastewater pipeline. An ES was generated to determine the potential for significant air quality effects arising from the Proposed Development as required by the Town and Country Planning (Environmental Impact Assessment) (EIA) (Scotland) Regulations 2017. According to the significance criteria adopted for the assessment, there are **no likely significant effects** for air quality at receptors due to emissions for the normal operation scenario.

6 Conclusions and Proposed Actions

6.1 Conclusions from New Monitoring Data

The results of the NO₂ monitoring across the Moray Council area during 2024 confirm that there are no exceedances of the annual average NO₂ objectives. A maximum measured annual mean NO₂ concentration of 14.7 μ g/m³ was monitored at West Park Court, Elgin 1 (monitoring site DT1), well below the annual mean NO₂ Scottish Air Quality Standard of 40 μ g/m³. During 2024, annual mean NO₂ concentrations show a decrease compared to the 2023 results at 18 out of the 19 monitoring locations. The average difference in NO₂ annual mean concentration across all sites from 2023 to 2024 is a decrease of 1.0 μ g/m³. The only increase in NO₂ annual mean concentration from 2023 to 2024 occurred at Elgin 4, with an increase of 2.2 μ g/m³.

6.2 Conclusions relating to New Local Developments

Recent developments in Moray include the extension of the Cairds Wood wind farm, and the construction of a 70 MWe electrolytic hydrogen production facility south of Marypark, Ballindalloch. Both projects have undergone environmental impact assessments to evaluate potential effects on air quality. The wind farm extension is expected to have minimal impact on local air quality due to managed vehicle exhaust emissions during construction and decommissioning phases. Similarly, the hydrogen production facility is anticipated to have no significant effects on air quality during normal operation, as per the Town and Country Planning (Environmental Impact Assessment) (EIA) (Scotland) Regulations 2017. Neither development is expected to introduce new exceedances of relevant objectives, exacerbate existing ones, or introduce new receptors or public exposure to significant air quality issues.

6.3 Proposed Actions

The monitoring data for 2024 does not identify any exceedances of the NO₂ objectives within the Moray administrative area. There are no other exceedances for other pollutants expected within the Moray administrative area within 2024.

The NO₂ concentration data from 2020 to 2024 shows variability and minor fluctuations, influenced by various local factors such as traffic, weather, and other activities. While the data does not indicate a consistent pattern of stabilisation, it does provide insights into the dynamic nature of air quality within the Moray administrative area. For instance, NO₂ levels increased from 2020 to 2021, decreased from 2021 to 2022, increased slightly from 2022 to 2023, and then decreased again from 2023 to 2024. These fluctuations highlight the complexity of air quality management and the need for ongoing monitoring to understand the underlying factors influencing NO₂ levels.

[☑] Annualisation has been conducted where data capture is <75% and >25% in line with LAQM.TG22.

Notes:

[☒] Diffusion tube data has been bias adjusted.

[⊠] Reported concentrations are those at the location of the monitoring site (bias adjusted and annualised, as required), i.e. prior to any fall-off with distance correction.

Exceedances of the NO₂ annual mean objective of 40 µg/m³ are shown in bold.

NO₂ annual means exceeding 60 μ g/m³, indicating a potential exceedance of the NO₂ 1-hour mean objective are shown in **bold and underlined**.

Means for diffusion tubes have been corrected for bias. All means have been "annualised" as per LAQM.TG(22) if valid data capture for the full calendar year is less than 75%. See Appendix C for details.

- (1) Data capture for the monitoring period, in cases where monitoring was only carried out for part of the year.
- (2) Data capture for the full calendar year (e.g. if monitoring was carried out for 6 months, the maximum data capture for the full calendar year is 50%).

- ☑ All erroneous data has been removed from the NO₂ diffusion tube dataset presented in Table B.1.
- ☑ Annualisation has been conducted where data capture is <75% and >25% in line with LAQM.TG22.
- ☐ Local bias adjustment factor used.
- **☒** National bias adjustment factor used.
- **⋈** Where applicable, data has been distance corrected for relevant exposure in the final column.
- ☑ Moray Council confirm that all 2024 diffusion tube data has been uploaded to the Diffusion Tube Data Entry System.

Notes:

Exceedances of the NO2 annual mean objective of 40 $\mu g/m^3$ are shown in $\boldsymbol{bold}.$

LAQM Annual Progress Report 2025

 NO_2 annual means exceeding 60 μ g/m³, indicating a potential exceedance of the NO_2 1-hour mean objective are shown in **bold and underlined**. See Appendix C for details on bias adjustment and annualisation.

LAQM Annual Progress Report 2025

Appendix C: Supporting Technical Information / Air Quality Monitoring Data QA/QC

New or Changed Sources Identified Within Moray Council During 2024

Moray Council has not identified any new sources relating to air quality within the reporting year of 2024.

Additional Air Quality Works Undertaken by Moray Council During 2024

Moray Council has not completed any additional works within the reporting year of 2024.

QA/QC of Diffusion Tube Monitoring

The NO₂ diffusion tubes used by Moray Council in 2024 were prepared and analysed by the Aberdeen Scientific Services Laboratory (ASSL), 20% TEA in water method. The laboratory is United Kingdom Accreditation Service (UKAS) accredited and has good performance in both the LGC Standards Proficiency Testing Scheme (AIR NO₂ PT) and National Physical Laboratory (NPL) QA schemes. The deployment of diffusion tubes has been completed in adherence with the Diffusion Tube Monitoring Calendar.

Diffusion Tube Annualisation

All diffusion tube monitoring locations within Moray Council recorded data capture of 75% therefore it was not required to annualise any monitoring data. In addition, any sites with a data capture below 25% do not require annualisation.

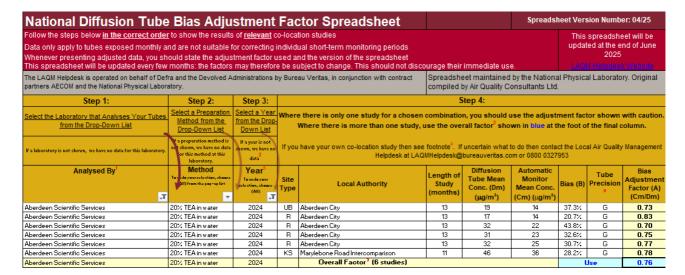

Diffusion Tube Bias Adjustment Factors

Moray Council have applied a national bias adjustment factor of 0.76 to the 2024 monitoring data. A summary of bias adjustment factors used by Moray Council over the past five years is presented in Table C.1.

The national factor was taken from the latest version of the national spreadsheet, released in April 2025. The factor is applicable to a total of six studies. The national adjustment factor was chosen as it is not possible to calculate a local adjustment factor due to the absence of co-located monitoring locations.

Table C.1 – Bias Adjustment Factor

Year	Local or National	If National, Version of National Spreadsheet	Adjustment Factor
2024	National	04/25	0.76
2023	National	03/24	0.73
2022	National	03/23	0.76
2021	National	09/22	0.77
2020	National	09/22	0.78

NO₂ Fall-off with Distance from the Road

No diffusion tube NO₂ monitoring locations within Moray Council required distance correction during 2024.

Appendix D: Monitoring Locations Maps

Figure 1 Diffusion Tube Monitoring Locations (1)

Figure 2 Diffusion Tube Monitoring Locations (2)

Figure 3 Diffusion Tube Monitoring Locations (3)

Figure 4 Diffusion Tube Monitoring Locations (4)

Glossary of Terms

Abbreviation	Description
AQAP	Air Quality Action Plan - A detailed description of measures, outcomes, achievement dates and implementation methods, showing how the LA intends to achieve air quality limit values'
AQMA	Air Quality Management Area – An area where air pollutant concentrations exceed / are likely to exceed the relevant air quality objectives. AQMAs are declared for specific pollutants and objectives
APR	Annual Progress Report
AURN	Automatic Urban and Rural Network (UK air quality monitoring network)
Defra	Department for Environment, Food and Rural Affairs
DMRB	Design Manual for Roads and Bridges – Air quality screening tool produced by Highways England
DT	Diffusion Tube
FDMS	Filter Dynamics Measurement System
LAQM	Local Air Quality Management
NO ₂	Nitrogen Dioxide
NOx	Nitrogen Oxides
PM ₁₀	Airborne particulate matter with an aerodynamic diameter of 10µm (micrometres or microns) or less
PM _{2.5}	Airborne particulate matter with an aerodynamic diameter of 2.5µm or less
QA/QC	Quality Assurance and Quality Control
SO ₂	Sulphur Dioxide
