

A group of four people are seen from behind, riding mountain bikes along a dirt path in a forest. The path is flanked by dense, golden-brown ferns and other autumnal vegetation. The riders are wearing various outdoor gear, including backpacks and hats. The background shows tall, slender trees with green foliage, suggesting a forest setting. The overall scene is bathed in warm, golden light, likely from the sun being low in the sky.

1. Introduction

The Land Reform (Scotland) Act 2003 gives everyone statutory access rights to most land and inland water. People only have these rights if they exercise them responsibly by respecting people's privacy, safety and livelihoods and Scotland's environment. Equally land managers have to manage their land and water responsibly in relation to access rights.

Simply having a right of access is not enough. Evidence suggests that generally what people prefer is to use paths rather than having to negotiate their way through the wider countryside. As a result one of the duties placed on Local Authorities under the Act is to produce a Core Paths Plan. This will provide people with a basic framework of 'key' paths for both visitors and locals that balances the provision for public access with the land management and privacy needs of those who live and work in the countryside.

The Moray Core Paths Plan adopted in 2023 replaces the original Core Paths Plan adopted in 2011. This Adopted Plan resulted from an extensive public consultation and a Local Inquiry process and the Plan is considered by the Moray Council to meet its legislative requirement of "providing a basic framework of Core Paths sufficient for the purpose of giving the public reasonable access throughout the local authority area".

This current adopted 2023 Plan has resulted from a review process carried out jointly by the Moray Council and the Moray Local Outdoor Access Forum (MLOAF).

It is inherent that the Plan focuses on the Statutory Core Paths. It has been necessary however to look at the greater access position in Moray, particularly how the wider Moray Paths Network feeds into Core Paths. Core Paths are not therefore viewed in isolation.

This Plan has been developed under the Moray Local Access Strategy Framework Document 2002. A copy of the strategy can be viewed on the Council's website www.moray.gov.uk

The strategy, which is in need of review, still provides a framework for preparation and implementation of the Moray Core Paths Plan with a view to improving and integrating the whole Moray Paths Network.

This Adopted Moray Core Path's Plan 2023 can be viewed and downloaded at www.moray.gov.uk/corepaths. Any queries relating to this Plan should be directed to:

**Moray Access Manager, Moray Council,
Council Office, High Street, Elgin, IV30 1BX,
Email: ian.douglas@moray.gov.uk,
telephone number 01343 543451.**

2. Reason for a Core Paths Plan and who is it for?

In general the plan has been produced for the following reasons:

- It is required to be produced by The Moray Council under the Land Reform (Scotland) Act 2003, and 2016.
- A need to set a vision for the format of the Moray Core Paths Network and how it will be developed and managed to unlock the full range of benefits to Moray.
- A need to facilitate opportunities to capitalise and consolidate scarce resources for paths and contribute to a wide range of local, regional and national policy objectives in terms of economic development, health, sustainable transport, community safety and social inclusion.
- A need to achieve focused, joined up thinking between Council departments, agencies and organisations with an interest in outdoor access, paths and sustainable transport.

In general the plan is for everyone who has an interest or a stake in outdoor access. In essence this includes everyone who lives in, works in and visits outdoor locations and paths in Moray. More specifically the following are considered to have a particular interest:

- Outdoor Access Users
- Land Managers including estate owners and farmers
- Health professionals/organisations
- Community Groups/Local Outdoor Access Groups
- Statutory agencies, including Moray Council departments, Scottish Natural Heritage, Historic Scotland, Forestry and Land Scotland and H.I.E. Moray.
- Outdoor leisure businesses
- Tourist operators and organisations

3. Legislative/Policy Linkages

Core Path Plans are a key component of the overall strategy towards outdoor access at a national, regional and local level. Outdoor access is central to delivery of a whole range of policy drivers and these are shown in **Appendix 1**.

The statutory requirement to produce Core Path Plans for each local authority area contributes to a raft of National Government objectives in terms of social justice, social inclusion, climate change mitigation, active travel, health and wellbeing and community economic development.

The Moray Core Paths Plan has and will help at a local level in achieving the following national targets:

- Cycling Action Plan for Scotland - 10% of all journeys to be made by cycle by 2020.
- Scottish Government 14 National Outcomes - Collectively aim to make Scotland a better place to live and a more prosperous and successful country.
- Scottish Government Climate Change Targets - Reduce greenhouse gas emissions by at least 42% by 2020 and 80% by 2050 relative to 1990 levels.
- Let's get Scotland Walking: The National Walking Strategy 2014 - Aspires to achieve levels of walking on a par with the best performing countries i.e. Netherlands, Norway and Switzerland.
- Let's make Scotland More Active: A Strategy for Physical Activity - Aims to increase proportion of physically active people in Scotland. Target to achieve 50% of all adults aged over 16 and 80% of all children aged 16 and under meeting the recommended minimum levels of physical activity by 2022.
- Scotland's Road Safety Framework to 2020 - Target of 40% reduction in people killed and 55% reduction in people seriously injured on Scottish roads relative to average figures for the 2004/08 period.
- Scotland's National Transport Strategy 2016 - Objectives incorporate concepts of providing better transport infrastructure, increasing connectivity and accessibility of the transport network, reducing emissions and improved safety.

At a regional and local level the production of the Moray Core Paths Plan will contribute to achieving the objectives of a range of strategies and policy documents including the following:

- Moray Sustainability Initiatives (LA21 and Environmental Charter)
- Moray Local Access Strategy - Framework Document 2002
- North East Scotland Biodiversity Action Plan
- Moray 2026 a Plan for the Future - Priorities includes a growing, diverse and sustainable economy; healthier citizens and safer communities.
- Moray Sustainability Initiatives (Local Agenda 21 and the Moray Environmental Charter) - Priorities include promoting environmental friendly travel and increasing environmental awareness.
- Highlands Tourism Action Plan 2020 - Activities and adventure and mountain biking are identified as assets with real growth potential. Nature, heritage and activities are identified as offering opportunities with sustainable tourism an area where capacity needs to be built.

- Tourism in Moray: Strategy for Tourist Development in Moray 2014 to 2025 - Identifies strategic priorities for development including the Pure Nature of Moray - coast/beaches, wildfowl, dolphins, star gazing, walks.
- Transport Strategy for the Highlands and Islands 2008 to 2021 - Action and investment focused on horizontal themes including: Promoting the long term development of walking and cycling across the region to reduce the use of cars for short journeys and to contribute towards good health; Increasing the efficiency of travel in and through urban areas by tackling congestion; Reducing car use on short journeys and by improving the public transport offer; Developing ways to reduce and mitigate the climate change impact of travelling in, to and from the region.
- Moray Local Transport Strategy 2011 - Key objectives include; Promote safer, inclusive and affordable travel for all; Increase sustainable travel choices to promote travel behaviour change. Reduce the need for car use and the environmental impact associated with transport and health.
- Moray Local Access Strategy: Framework Document 2002 - Aim is to satisfy the public's need for access and to maximize the social, economic and environmental benefits to the Moray area within the limited resources available.
- Moray Open Space Strategy 2018 - Included as Supplementary Guidance to the MLDP 2020. Objectives include: To address the importance of accessibility and walkability to public open space; To avoid fragmentation of existing open spaces and encourage creation of green networks.
- Moray Woodland and Forest Strategy 2018 – Aims are; harnessing the potential of our woodlands; connecting people and communities to our woodlands and protecting and enhancing our woodlands.
- Moray Road Safety Plan 2018 - 2022 – Working towards improving road safety in order to significantly reduce the level of people being killed and seriously injured and the associated pain and suffering. A priority is to protect the most vulnerable road users i.e. cyclists, horse riders and pedestrians.
- Moray Local Development Plan 2020 – The Plan advocates a placemaking approach to it's spatial strategy which in it's environmental context include provision of safe and pleasant walking and cycling routes and creation of well-designed multi-functional green spaces and networks that encourage people to lead healthier lifestyles.
- Moray Active Travel Strategy 2022 - 2027 – The action plan includes and action to further develop the Active Travel network including identifying a network of routes including the identification and integration of the Core Paths network, that connects communities where 'every day' journeys could be made by cycle or foot.
- Moray Economic Strategy 2022 - 2032 – Recognises the increasing awareness of the importance of visitor infrastructure and sustainable transport modes eg. through the Rural Tourism Infrastructure Fund Development Plan (Moray routes) for strategic walking and biking routes.
- Moray Climate Change Strategy 2020 - 2030 – Includes as an overall approach the transition to a non-fossil fuel transport system. Also aims to promote, develop and encourage active travel.

4. Plan Objectives

This Moray Core Paths Plan has four principle objectives. Once the Plan is amended through the Review process, these objectives will collectively make up the vision until 2025.

- To provide an initial basic framework of Core Paths sufficient for the purpose of giving the public reasonable access throughout the Moray Area.
- To facilitate a co-ordinated and planned approach to the development, management and promotion of the whole Moray Paths Network including identified Moray Core Paths. Identified paths should accord with the guiding principles and key features laid down for the whole Moray Paths Network in the Moray Local Access Strategy Framework Document 2002 (**see Appendix 2**).
- To maximise the social, economic and environmental benefits to the Moray area, consolidating the limited available resources (**see Appendix 3**).
- To minimise any impact on the environment that may result from improvements to Moray's Paths infrastructure reducing motorized journeys, creating and maintaining an active travel infrastructure network, and raising Awareness of active travel.

5. Core Paths Selection and Criteria

Both General Government Guidance and specifically devised criteria were used in the selection of Moray's Core Paths.

(a) General Government Guidance

Information about Core Paths is given in the Land Reform (Scotland) Act 2003, The Scottish Outdoor Access Code (S.O.A.C) and the Scottish Executive Guidance to Access Authorities. The guidance gives the general context for what Core Paths should be.

To summarise the guidance, Core Paths should be routes including waterways to facilitate the exercise of access rights under the 2003 Act. The guidance states, **"The Core Paths system should provide the basic framework of routes sufficient for the purpose of giving the public reasonable access throughout a Local Authority area. This will be the key test of the robustness and validity of the Moray Core Paths Plan".**

The guidance provides the following general points on Core Paths:

- The Basic Core Paths framework will link into and support a wider paths network.
- Suitable provision of Core Paths is intended to assist in the management of access, particularly over agricultural land.
- The Core Paths network when considered as a whole, should provide for all forms of recreational access (e.g. walking, canoeing, cycling, horse riding, etc.)
- All Core Paths should be signposted at key access points with boundary crossings in a safe and useable condition with path surfaces serviceable for the anticipated users.
- Core paths can include rights of way, cycleways, safe routes to school, long distance paths, roadside pavements and quiet public roads.
- There is no design standard for Core Paths which can have a variety of surfaces from earth paths to tarmac roads. The routes however should be free from physical barriers where possible. Rivers and lochs can also be Core Paths. Core paths do not all have to connect but there is an expectation that routes will provide meaningful loops and networks and where possible link to neighbouring communities and places of interest where demand is high.
- Core Paths should connect where possible with Core Paths in neighbouring Local Authority areas.
- Core Paths can be existing routes and proposed new routes. Any new path would need to be developed for use by the time of Core Path Plan adoption or reasonably soon after (i.e. within 2 years).
- Multi use - The Core Paths Network should as far as possible provide for the needs of all types of user within the context of the natural limitations and physical constraints of the path terrain. Where a path has man made constraints preventing multi use (for example a steep flight of steps, stiles or other constructed barriers), then that path should generally not be a Core Path until such time as these barriers are removed.
- Core paths should be suitably managed and promoted. This is not a statutory requirement placed on local authorities so a variety of measures and approaches will need to be explored. Resource considerations will ultimately inform choices in development of a 'sufficient' system of Core Paths and may limit the number of adopted Core Paths.

(b) Specific Criteria and Route Selection

Whilst the government guidance gives the general context of what Core Paths should be and how they should function, it is clear that there is need for a more refined approach which is appropriate to the access experience in Moray.

Not all paths have been identified as Core Paths. Simple criteria reflecting the Moray context have been applied as an effective and robust way of selecting Core Paths within the Moray area.

It is clear in Moray opportunities do exist to derive a network of linked Core Paths particularly in lowland areas around and between communities and along the major river valleys. Upland paths are therefore, with a few notable exceptions, by and large part of the wider Moray Paths Network rather than being Core Paths due to their considerable distance from settlements and limited functionality. Focusing Core Paths around and between settlements has been a key approach in route designation.

The strategic and local context were combined to formulate seven criteria for selecting Core Paths in Moray as contained in the original 2011 plan. No changes to the original criteria were considered to be necessary as part of the Plan review nor were requested from public consultations therefore they remain unchanged in this 2023 plan.

The approach advocated in selecting routes is simple, namely that candidate routes to qualify as Moray Core Paths have to meet the majority of the criteria listed below.

(i) Links Communities and places together

Communities include towns down to small scattered settlements with a few houses. Places include built attractions, natural features and historic sites, (these might include visitor centres, leisure facilities, viewpoints and cemeteries). Core paths should start or finish at a settlement or pass through a settlement or connect to another Core Path. Within larger towns Core Paths can connect between neighbourhoods.

(ii) Multiple use and multiple benefits

Paths with the width, gradient and surface suitable for a variety of users are most likely to be Core Paths. Core Paths can also include inland water and rivers. All paths should be barrier free as is practicable to permit use by the widest range of users. Core paths should function to maximise potential multiple benefits (i.e. social inclusion/community, sustainable transport, health, leisure, tourism).

Core Paths must not have any dangerous hazards that present unacceptable risks to users. All risks should be within tolerable levels for all types of users who have the right of responsible access under the Land Reform (Scotland) Act 2003.

(iii) Community Demand

Recognition will be given to the level of demand identified in previous/current consultations with users, potential users, commuters, community groups and the wider public. This will require to be balanced with the realistic availability of capital and revenue funding.

(iv) Supports the wider path networks

Core Paths must provide a framework accommodating access links to an existing and potential wider paths network in any area including promoted paths and other paths.

(v) Moray Local Outdoor Access Forum

Any route should be endorsed by the Moray Local Outdoor Access Forum as a Core Path, although the Moray Council reserves the right to make the final decision. The Forum is representative of Communities, Access users, Land Managers and Agencies across Moray as the main stakeholders in outdoor access.

(vi) Environmental Impacts

Core Paths in their designation, development, management and promotion must not place unacceptable negative impacts on Moray's environment with specific sensitivity being given to areas with Natural and Historic Heritage Designations.

(vii) Added Value

Identified paths must have a clear 'added value' which will be derived from designation as Core Paths including one or more of the following:

- A Potential for Core Paths to reduce or avoid management conflicts, i.e. defining an access corridor along a path can help manage access to assist the overall management of an estate or farm.
- B Paths at Risk - Where paths are under threat from development encroachment their designation as Core Paths will afford a degree of protection through the statutory planning system.
- C Public Policy - Designation of a route may assist realisation of policy objectives within statutory organisations e.g. Moray Council, N.H.S. Grampian, HIE Moray, Scottish Natural Heritage. Such strategic benefits need to be maximised to facilitate an integrated policy approach.
- D Designation of a route as a Core Path will raise the profile and potentially increase usage of the path.
- E Designation as a Core Path will enhance the function of a route where it is a principle access point to an adjacent wider public access area and/or network of paths.

6. Core Paths- Statutory advantages of designation

The maps contained within this Plan show a variety of path types which make up the Moray Paths Network. Of these only the Core Paths are a statutory designation required by the Land Reform (Scotland) Act 2003. The general public right of responsible access established under the Act applies to all the paths outlined on the maps including Core Paths. Core Paths however enjoy the following additional advantages from their statutory status:

- Protection through the statutory planning system with a specific policy reference in the statutory Moray Local Development Plan - to safeguard routes from development encroachment.
- Works can be carried out by the Council to sign and maintain routes without requiring owner consent. Signing of Core Paths is not an obligation or duty imposed by legislation albeit government guidance states that signage should be provided at main access points.
- Enforcement proceedings can be enacted by the Council to reinstate ploughed sections of paths. Such action would only be pursued as a last resort
- Core Paths will appear on future editions of O.S. maps.

7. Strategic Environmental Assessment

The Environmental Assessment (Scotland) Act 2005 which came into force on 20th February 2006 requires all public plans, programmes and strategies to be subject to the process of Strategic Environmental Assessment (S.E.A.) where there will be significant environmental impacts.

As the Initial Moray Core Paths Plan 2011 was an entirely new 'public plan', it required to be the subject of a S.E.A. An S.E.A. was run concurrently with the process of producing and adopting the original Moray Core Paths Plan.

This Adopted Moray Core Paths Plan 2023 resulting from the review process is not subject to an S.E.A. as the proposed changes were not considered to have a significant environmental impact.

8. Path Development

Much has been achieved in Moray since year 2000 in terms of development of the whole Moray Paths Network. A number of outdoor access development projects have been implemented through partnerships between various funding agencies and Local Community Access Groups. Additionally a network of cycle paths has emerged through a number of externally funded projects spearheaded by the Moray Council. The Forestry Commission has also developed a variety of leisure routes in extensive areas of woodland across Moray. Paths have also been created by land managers through the Scottish Rural Development Programme (S.R.D.P).

Designation of Core Paths in Moray should build on what has already been achieved largely requiring small scale improvement works to make existing paths more accessible.

This Plan features Core Paths as the required statutory framework for access. It also has regard to other paths which are signposted and promoted as part of Local Paths Networks around communities. There is a need for development of new 'aspirational' routes. Developing such Aspirational Core Paths would need major upgrade to existing paths or involve creating new paths. Such routes are considered desirable to provide future Core Paths which could function particularly for cycling and walking, encouraging more people out of motor vehicles to pursue active travel modes for work, leisure and access to services.

This Adopted Plan 2023 includes a number of Aspirational Core Paths that have since been developed and are now new Core Paths.

The whole Moray Paths Network including Core Paths with satisfactory comprehensive development and management arrangements has the potential to achieve the full range of benefits (**see Appendix 3**) to be derived from an integrated paths network.

Issues

- Need to take a long term developmental view incorporating future Aspirational Core Paths. These are upgraded or new path links required to optimise effectiveness of the overall paths network and to capitalise on active travel, (i.e. walking and cycling), and sustainable transport opportunities, (i.e. non motorised).
- Need to accommodate all users where possible and not just walkers which is often the main development focus.
- Presence of physical barriers on some paths which limits accessibility to a wide range of users.
- Ongoing support needed to ensure continuance of efforts of Local Community Access Groups in development of Paths Networks.
- Need to continue a co-ordinated, planned approach targeting priorities in the development of Core Paths and the wider Moray Paths Network.
- Core Paths should not be given undue prominence over other routes in the Moray Paths Network which are equally important in terms of facilitating access rights.

Policy 1 - Network Development

The Council will continue to pursue development opportunities through partnership working to create improved Statutory Moray Core Paths and the wider Moray Paths Network identified on the Moray Core Paths Plan maps. All Core Paths where practical should be fully accessible to walkers, horseriders, cyclists and less able users and a development programme will continue to outline required improvements.

Policy 2 - Aspirational Core Paths

The Council will continue to support initiatives to develop new paths. These non statutory Aspirational Core Paths will provide new links with a focus on facilitating active travel and sustainable transport. All routes will be subject to detailed feasibility and landowner agreements prior to any commencement of development.

These aspirational routes are not shown in this plan but are contained in separate documentation held by Moray Council available for public reference on request. Aspirational Core Paths are outlined to target future resources and are indicative only representing broad ideas.

9. Paths Management

Whilst Paths development has been supported by a wide range of funding agencies and organisations, it is ongoing paths management that has proved to be more challenging to achieve in a sustainable way. It is important to ensure that the whole Moray Paths Network including Core Paths are properly managed and maintained to sustain optimum user accessibility into the future otherwise many of the possible benefits will be lost. A major part of the challenge has been and will continue to be considering paths and associated infrastructure as assets which require to be managed to ensure they are always fit for purpose.

Management arrangements for Moray's paths have been somewhat ad hoc involving input from the Moray Council, Forest Enterprise Scotland, Land Managers, Criminal Justice Community Services, Local Community Access Groups, and other volunteers. Whilst the current effort achieves results, much of it is short lived and unsustainable in the long term. There is still a need to pull this effort together and consolidate other management opportunities, making the most of what human and financial resources are available. It is also important to ensure ongoing site monitoring of Moray Core Paths and the wider Moray Paths Network to determine necessary measures to ensure optimum accessibility.

The Moray Local Access Strategy Framework Document produced by the Moray Council in 2002 requires that a Management Plan be produced for the whole Moray Paths Network. The whole Core Paths network was surveyed in 2022 and assets recorded on a database. This has allowed for creation of a management plan for identified priority Core Paths.

Management arrangements will vary from path to path. Some Core Paths have been labelled as 'Most Accessible Core Paths', which where these are off road are likely to require a more rigorous management regime to keep them fully accessible to a wide range of users. The management plan focuses on these routes as a priority along with other routes where addressing barriers to access would make them much more accessible.

Opportunities will continue to be taken in the way Core Paths are managed to control invasive species and manage adjacent habitats (subject to resource availability) to support species on the Scottish Biodiversity List and the aims of the Scottish Biodiversity Strategy.

Issues

- Still somewhat ad hoc and un co-ordinated existing paths management arrangements for paths in Moray although prioritised routes now have a regime in place.
- Some paths still have little or no maintenance which results in limited accessibility.
- Heavy reliance on voluntary management arrangements which is unsustainable in the long term.
- Some Moray landowners still feel unsupported in the task of public paths management.
- Reduction in maintenance by the Moray Council of Core Paths due to a series of major budget cuts.

Policy 3 - Paths Management Plan

A Management Plan will continue to be developed for the Moray Paths Network focussing on Statutory Core Paths. This includes partnership agreements to clarify Moray Council, Land Managers/Landowners, Statutory Agencies and voluntary group responsibilities. The Management Plan will provide for co-ordination by the Council of overall effort including the following:

- Risk assessment//health and safety audits/required measures
- Audit of path assets
- Arrangements for route inspections/condition monitoring and feedback mechanisms
- Life terms for structures and replacement dates
- Ongoing maintenance requirements - short, intermediate, long term
- Maintenance responsibilities
- Priority focus of resources on off road 'Most accessible Core Paths'
- Access agreements
- Costings and funding arrangements
- Encouragement of responsible public access and management of user conflicts
- Public liability
- Monitoring of path usage
- Minimising environmental impacts - methods for minimising adverse impacts on designated Natural Heritage (including Natura) and historic heritage sites.
- Consideration of supporting facilities, e.g. car parks, toilets, etc.
- Focus on removing barriers to access.

10. Signage and Promotion

Much has already been achieved in signage and waymarking of paths across Moray in a standardized way which allows for identity of local community areas to be featured through for instance use of local colours and logos. Forest Enterprise Scotland also have their own readily identifiable signage format for their leisure trails. This locally based identity has been continued in production of map boards, interpretation panels and route leaflets.

This approach of featuring the identity of specific Local Access Networks should continue across Moray. All Moray Core Paths should be signed under government guidance at main access points giving simple information on destination and distance. The council has since 2011 implemented a signage programme of Core Paths but this has been modest in scale and has been reduced by budget cuts. Consequently some of the identified Core Paths are signed but a large proportion still remain unsigned. Promotional infrastructure placed on Core Paths needs to have regard to the local identity already developed for paths within each Local Community area and within Forest Enterprise Scotland land. Modern e-based technology has a great potential to be used to reach a wide audience in the promotion of Moray Core Paths and the wider Moray Paths Network. In this context continuing development and updating of the existing www.morayways.org.uk website will facilitate the branding of Moray as a quality outdoor access destination. The website is now maintained independently by the Moray Way Association.

Issues

- Need to continue to accommodate local community identity in signage and promotion of paths.
- Need to continue approach of erection of map boards located centrally within settlements featuring paths within each local area.
- Need to continue to develop a 'one stop shop' for information on access in Moray. The 'Morayways' website was created in 2006 for this purpose as part of a marketing strategy to brand Moray as a quality outdoor access destination but the website needs ongoing development and updating to continue to function effectively.
- Experience of users on paths could be enhanced by additional interpretation infrastructure highlighting often hidden natural heritage, historic built heritage and local cultural features.

Policy 4 - Paths Signage and Promotion

The approach to signage for Paths in Moray and other paths in Moray will be based on the following:

- Provision of signage for Paths in Moray including Core Paths which accommodate distinctive identity of each Local Community Area and Forest Enterprise Scotland land. This is inherent in the development programme required under Policy 1.
- Provision of interpretation infrastructure and centrally located map boards to raise public awareness and enhance user experience of paths.
- Continuing development and updating of the Moray Way Association website ie. www.morayways.org.uk and site linkages.

11. Mitigating Impacts

Moray has a high quality natural environment. It contains a number of sites of international, national and local importance relating to ecology, geology, geomorphology and landscape. Additionally there are a number of historic sites and ancient monuments of interest. Moray also has excellent water quality in all of the area's watercourses and lochs.

It is not envisaged that the designation and any subsequent development, management and promotion of Moray's Core Paths will have major detrimental effects on the area's environment and heritage. Path developments and improvements will for the most part be modest in scale. Expected usage of the paths similarly is unlikely to give wide cause for concern in terms of adverse impact. Indeed environmental benefits may result through paths channelling public access away from sensitive sites and increasing opportunities for sustainable transport. Nevertheless it would be prudent to provide safeguards in the way the paths are developed and managed to ensure that any potential adverse impact on the area's environment and heritage are minimised. This approach will be of particular relevance where Core Paths pass through or near to International Nature Conservation Designations (Special Areas of Conservation, Special Protection Areas, Ramsar Sites) and National Designations (Sites of Special Scientific Interest, National Nature Reserves). No additional development, management and signage of Core Paths is envisaged at or near to designated historic sites therefore no adverse impacts will result from Core Paths designations in Moray.

The SEA Environmental report on the original 2011 Plan concluded that there would be no adverse impact on the natural heritage resulting from the Core Path designations. The original finding of the SEA are considered to equally apply to this new adopted Plan 2023. The following activities could affect natural heritage interests:

- Construction of new paths
- Upgrading of existing paths
- Changing of maintenance regimes
- Improving promotion in ways likely to increase or change the type of path use (eg. impact from dog use that results from path promotion activities).

These activities before being carried out should be assessed carefully for possible impacts. No such activities should be undertaken until an assessment of likely significant effects on sensitive natural heritage interests is undertaken, which must reflect protective legislation. This approach is key to ensuring mitigation of any adverse environmental impacts resulting from the Moray Core Paths Plan.

Issues

- Importance of protecting the integrity of Moray's high quality environment particularly where Core Paths pass through or near to designated natural heritage and historic sites.
- Need to consider a 'light touch' in sensitive locations for Core Paths development and management to minimise adverse environmental impacts.
- Need to consider specific management measures along paths which are located near to or through sensitive sites.

Policy 5 Principles for Core Paths to Mitigate Adverse Environmental Impacts

The following principles shall be applied to minimise the environmental footprint in terms of designation, development, management and promotion of Core Paths across Moray:

- Do 'minimum necessary' works to paths to make them fit for purpose.
- All materials where possible to be natural and sourced locally focussing on best fit with the landscape.
- All signage, mapboard and interpretation infrastructure to be finished in natural low key colours and textures.
- All path treatments to be assessed to minimise pollution of water courses.
- Consideration of measures to manage access along paths which pass through or near designated historic/natural heritage sites. Measures to be devised in consultation with appropriate authorities, i.e. SEPA, SNH and Historic Scotland.
- For any development/management activity on or near a Natura 2000 site, the Moray Council will need to consider what level of mitigation may be necessary to avoid adverse impacts on the qualifying habitats or species of the site(s). Mitigation may include, but is not limited to, the submission of method statements detailing design, precautions and good working practices which will avoid sensitive periods of the year. Any activity can only take place if the Moray Council can ascertain that it will not adversely affect the integrity of any Natura 2000 site.
- For any development/management activity on or near to a Site of Special Scientific Interest, the Moray Council will need to consider what mitigation may be necessary to avoid adverse impacts on protected natural features of the site(s). Mitigation measures may be as per Natura 2000 sites above.
- Consideration to be given to protected species which may be affected by development / management works. Surveys should be carried out to establish protected species presence / absence and use of the site the information gathered to be used to determine required mitigation and timing of work.

12. Resources and Implementation

There is no legal obligation on landowners or access authorities, (i.e. Moray Council) to maintain or improve Core Paths. The Moray Core Paths Plan would however be of a limited value unless some thought was given as to how the paths network could be improved through development, promotion and better management. The Scottish Executive in their guidance have indicated they expect all Core Paths should be signposted at key access points and all boundary crossings should be accessible to all legitimate users. Even achieving these minimal improvements will require considerable resource allocation. It remains purely optional as to whether the Moray Council will allocate specific financial resources towards development, management and promotion of the Moray Core Paths Network.

Since year 2000 in excess of £7 million (from the Council and external grants) has been spent in Moray on Paths development and promotion. This has resulted in considerable accessibility improvements to the overall Moray Paths Network. What has been less easy to achieve over the same period is securing adequate resources for management and maintenance with many paths not being looked after as well as they should. Inadequate maintenance arrangements can mean the full benefits to be derived from paths will not be fully realised.

It is unrealistic to expect that the Moray Council is in a position to fully fund development, management and promotion of Core Paths and the wider Moray Paths Network, given the current difficult financial position and other competing priorities. Other financial and human resources do exist to greatly assist the overall effort. In this regard current partnership arrangements with Local Community Access Groups, user groups and other organisations / agencies should continue to be built upon and be strengthened to maximise all opportunities thus securing resources to take the Moray Core Paths Plan forward.

The Cairngorms Outdoor Access Trust (now the Outdoor Access Trust Scotland) successfully secured funding and subsequently upgraded sections of the Dava Way and Moray Coast Trail Core Paths. This approach could be replicated for other Core Paths. Additionally opportunities are presented by recent Wind Farm developments where funds have been set up for community developments which could include development and management of the Core Paths Network. In relation to this the Council has secured an annual contribution of £50k since 2019 from the Dorenell Windfarm towards Core Paths in Moray. The Council has used this funding to develop an Action Plan for the improvement and management of selected prioritised Core Paths.

Issues

- Ongoing support needed to ensure continuance of efforts of Local Community Access Groups and other voluntary groups.
- Financial constraints and other competing priorities within Moray Council.
- Need for closer links between Core Paths Planning and the Statutory Planning system particularly for securing resources from developer contributions.
- Scarce resources particularly for path management and maintenance.
- Need to focus on the community planning, health and sustainable transport agenda to unlock resources for outdoor access.
- Need to consolidate agency and community partnerships to unlock resources and 'in kind' assistance.
- Need to take full advantage of Community Development Funding from various Wind Farm Schemes across Moray

Policy 6 Resources for development, management and promotion of Moray Core Paths and the wider Moray Paths Network

The Moray Council will continue to explore all opportunities to secure resources for development, management and promotion of Moray Core Paths and the wider Moray Paths Network. This approach will be based on the following measures:

- Securing external grants and funding, including Wind Farm Community Development funds.
- Encouraging and supporting initiatives by landowners, farmers and land managers to develop and manage paths through the Scottish Rural Development Programme and other related schemes.
- Providing ongoing support of the activities of Local Community Access Groups in their continuing efforts.
- Working with local environmental and community support organisations to assist with routine paths maintenance of Moray Core Paths and the wider Moray Paths Network. Organisations include Criminal Justice Community Services.
- Pursuing 'in kind' resources from partner agencies including Scottish Natural Heritage, Historic Scotland and Scottish Forestry.
- Seeking Developer Contributions through the statutory planning system to finance path improvements where there is a relevant direct impact from development which requires mitigation.

13. Plan Review

Legislation requires the Moray Core Paths Plan to be reviewed periodically following adoption, but no specific time frame has been given. This 2023 Plan was derived from the first review carried out within 7 years of the original Plan Adoption in 2011, considered to be a suitable time frame for any future reviews.

Policy 7 Moray Core Paths Plan Monitoring and Review

The Council will review the Plan every 7 years or so and monitor progress on implementation of the Plan Policies.

Implementation of the Moray Core Paths Plan will require partnership with a variety of groups, organisations and agencies. An Action Plan is set out in Table 1 outlining delivery timescales and principal partner organisations. The table includes a review of progress on the actions to date since the original Core Paths Plan Adoption in 2011.

Key to table:

Short timescale – 0 to 3 years
Medium timescale – 4 to 7 years
Long timescale – 8 + years

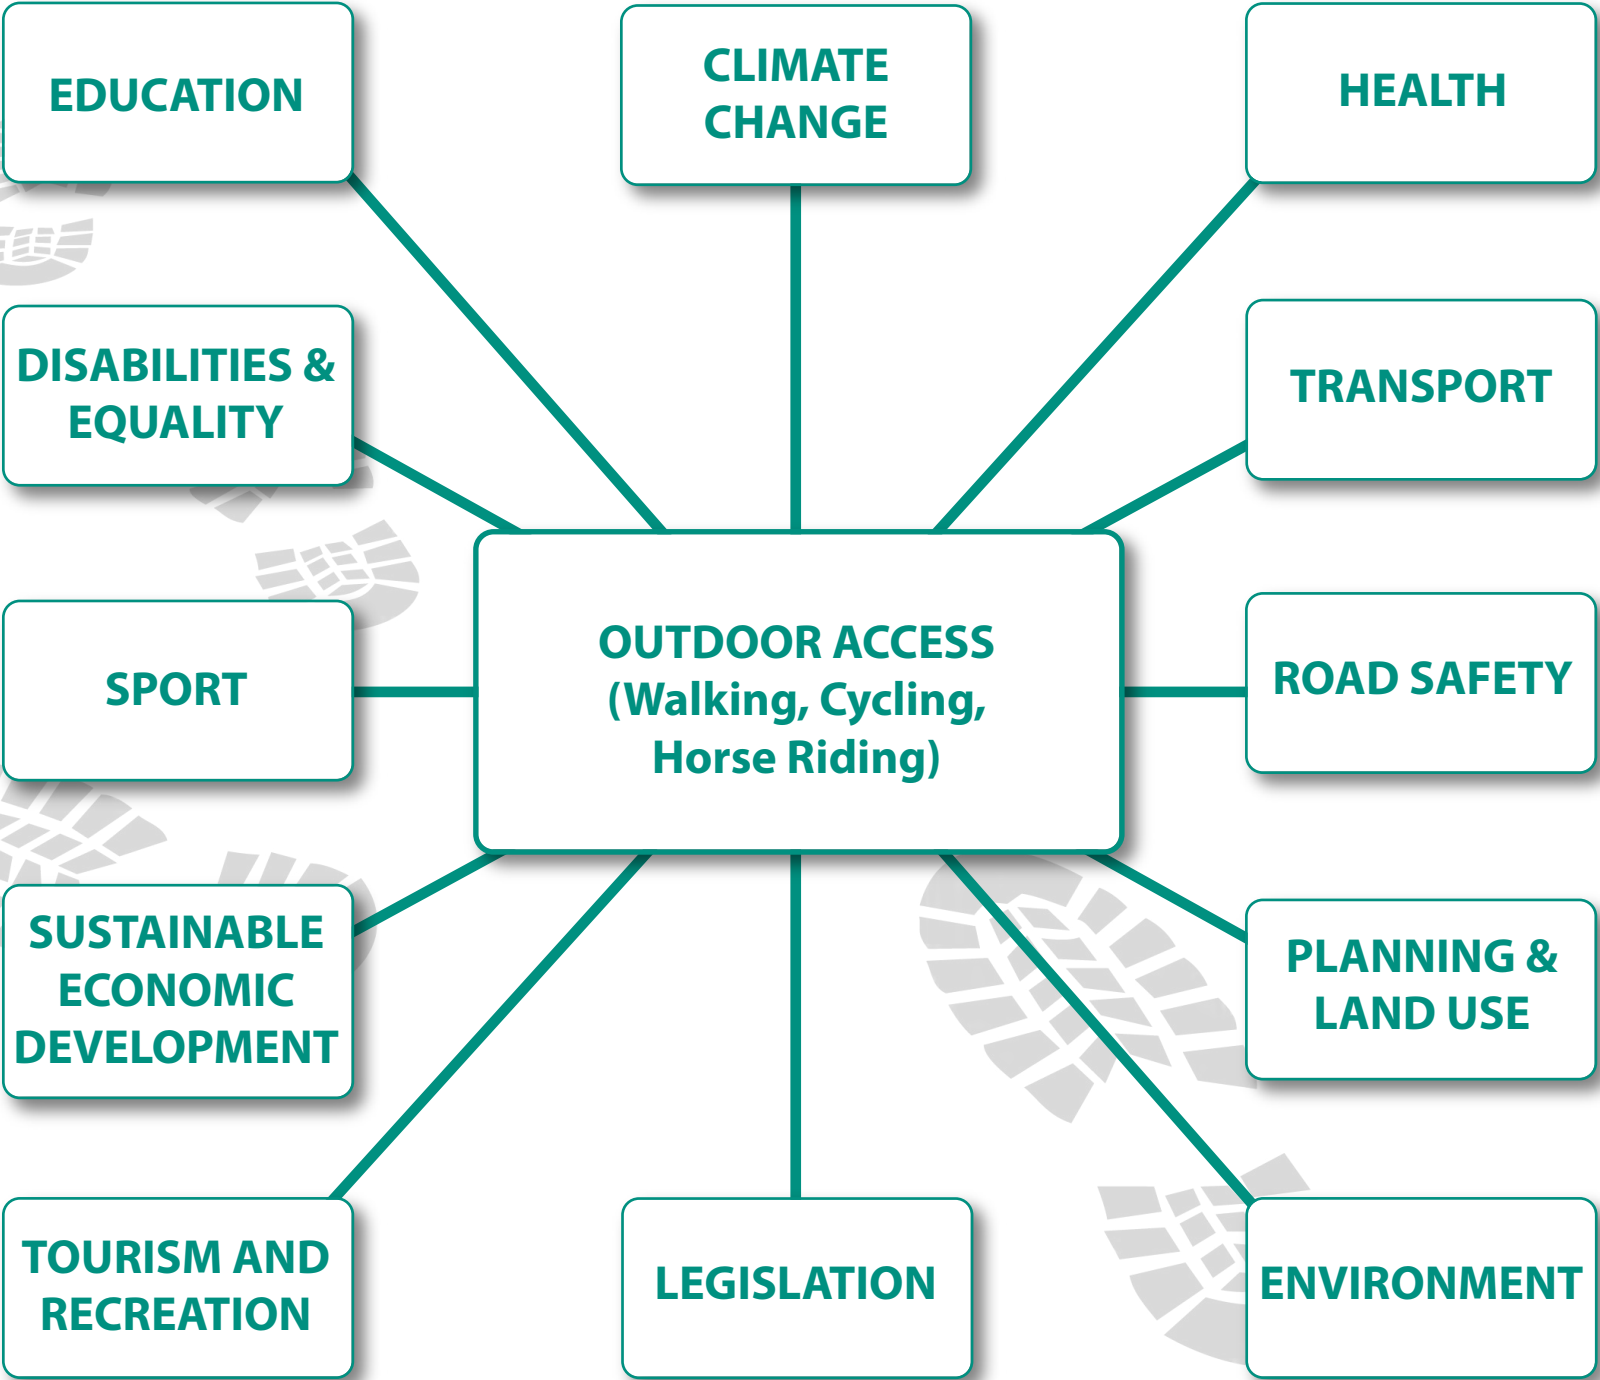

Abbreviations used in table

UG	User groups, e.g walking and cycling clubs
LM	Land Managers (including landowners and farmers)
HES	Historic Environment Scotland
SEPA	Scottish Environment Protection Agency
TMC	The Moray Council
CSO	Community Support Organisations, e.g Criminal Justice, Community Services, Lochpark Challenge, Moray Ranger Service
HIEM	Highlands and Islands Enterprise Moray
PFAP	Paths for all Partnerships
SNH	Scottish Natural Heritage
HITRANS	The Highland and Islands Transport Partnership
LCAG	Local Community Access Groups
MLOAF	Moray Local Outdoor Access Forum
FLS	Forestry and Land Scotland

Table 1 - Action Plan

Appendix 1 - Outdoor Access - National Policy Drivers

Appendix 2

Moray Local Access Strategy Framework - Guiding Principles and Key Features of the whole Moray Paths Network

Guiding Principles.

1. The Moray Paths Network will be developed as a series of inter-connecting routes, to provide a variety of opportunities for the residents and visitors to Moray. Access to the countryside will be provided, as appropriate, to enable people to participate in quiet informal recreation and gain safe passage across land. Within settlements networks will be developed to improve recreational and transportation opportunities for residents and visitors. Where technically possible, due consideration will be given to the provision of access for all abilities.
2. All developments will be designed for sustainability, in keeping with the local environment and will be sympathetic to the needs of wildlife, communities and land managers. Associated infrastructure such as gates, stiles or bridges will provide for easy passage whilst minimising land management problems.
3. Provision of access will be designed to reduce pressure on sensitive sites and routes should be developed to reduce potential conflict between land managers and users. New developments and upgrading of existing routes will provide robust access 'fit for purpose' and long term maintenance requirements considered in the planning and implementation of the network. Access will be secured by formal and informal agreements between land managers, community groups and the Moray Council.
4. Paths will be promoted, waymarked and interpreted appropriate to their setting using a coherent style. Opportunities will be sought for increasing awareness and understanding of the countryside and its management.

Key Features

- a. The network should provide for a range of recreational experiences including short circular walks; long walks from place to place; access to features of visitor interest and should give opportunities in a variety of physical settings.
- b. Paths should be developed on the basis of established demand, both from communities and visitors. Future and latent demand should be investigated as part of the planning phase of the network to take advantage of potential benefits of access such as alternative transport options, motor traffic reduction and health benefits.
- c. Routes should include, where possible, multi-user potential for walkers, cyclists and horse riders. Separate provision for specific user groups should be made if appropriate to ensure user safety and enjoyment.
- d. Where feasible, routes should provide for all abilities including wheelchair access.
- e. Routes should ideally be accessible from settlements without the use of a car and should, where possible, be serviced by public transport.
- f. Paths should provide high quality recreation and transportation opportunities within and between settlements, and access to the countryside as appropriate.
- g. Paths may be included in the network as 'safe routes to schools' and commuter routes both on and off road.
- h. Paths will be maintained to a standard appropriate to their use and setting.

Appendix 3

Potential Benefits of Access Improvements

The following benefits have the potential to result from implementation of the Moray Core Paths Plan.

(a) Community Benefits

- Paths are free and available for all
- Allows people, including the less able to walk, cycle and horse ride with confidence
- Benefits landowners - should help by integrating the public use of land and other land management activities
- Increases leisure opportunities in locality
- Reduces need to travel by car and provides for alternative transportation
- Reinforces community links (physical and cultural)
- Community empowerment and ownership
- Community safety specifically for road accidents. (It is important to ensure that through appropriate layout and design that safety fears on routes are minimised).
- Sustains services within rural communities.

(b) Health

- Greater frequency of walking and cycling will increase physical health
- Reduced stress and increased sense of well being

(c) Economic Benefits

- Provision of 'green' tourism infrastructure in the form of integrated access routes
- Increased number of visitors to Moray and resultant injection of finance into the local economy
- Potential for job creation and business growth i.e. tourism, stimulation of local suppliers
- Extension of tourist season and increased length of stay
- Greater focus on Moray visitor attractions
- Consolidation of external grant funding opportunities, e.g. Landfill Tax Credits, Scottish Rural Development Programme, ERDF.
- Opportunity for private sector sponsorship
- Support to existing tourist enterprises
- Low cost leisure provision relative to benefits
- Financial savings and lower unit costs
- Increases opportunity for effective promotion of 'Moray' as an active tourist destination
- Value for money - low cost per head of population in relation to other forms of transport and leisure
- Prioritise limited funds

(d) Environmental Benefits

- Reduced pollution with reduction in car usage - commuting in towns and for trips to leisure
- Facilitates better understanding and appreciation of the countryside
- Opportunity for environmental education
- Reduced traffic congestion and parking problems in towns

CORE PATHS INFORMATION - TABLES AND MAPS

A. Map Numbers

To help orientate you the maps have been broken down into easily referenced areas as follows:

Map 39	River Spey Access/Egress Points (SRA 7 to 12)

B. Map Labelling for Core Paths

Due to the considerable number of Core Paths now proposed, Moray has been split into twelve areas in terms of route numbering.

Each area is identified by the following prefixes for each Core Path number featured on the maps and the corresponding Core Paths list and attributes tables.

Prefix	
FR	Forres
LM	Lossiemouth
EG	Elgin
FB	Fochabers
BK	Buckie
KT	Keith
CU	Cullen
SP	Speyside
SW	Speyside Way
IW	Isla Way
MCT	Moray Coast Trail
DW	Dava Way
SRA	Spey River Access

C. List of Core Paths and Attributes Tables

Core Path numbers on maps relate directly to the Core Paths Lists and attributes tables as follows. These tables give basic information on the physical nature of each route to allow users to determine how accessible any given path is for their particular activity.

D. The Maps

On the maps you will see three path types identified which collectively comprise the Moray Paths Network. These three route types shown are defined as follows:

Core Paths - Statutory paths designated under the Land Reform (Scotland) Act 2003. These provide the framework for public access across Moray. Generally designated Core Paths currently exist on the ground sometimes requiring only minor physical improvements to make them function more successfully as accessible paths.

Promoted Paths - Routes which are currently signposted, waymarked and/or are featured on centrally located map boards within settlements. These routes may also be featured on publicity materials such as web sites and leaflets.

Existing Paths - These routes include a variety of minor roads, tracks and earth paths. They were identified from previous public consultation exercises as paths which people used.

Most Accessible Core Paths in Moray

Most Accessible Core Paths are indicated in the Core Paths Lists and Attributes Tables. These paths do not conform to a specific design standard but rather meet common requirements devised by the Moray Access Panel. These paths function to be accessible to a wide range of users including the less able.

Most Accessible Paths in Moray:

- are barrier free, i.e. no steps, gates, stiles, etc;
- have a sound, even free draining surface (bound or unbound) of no less than 1.2 metres width with a safe margin no less than 1 metre on either side. Preference for wider sections to allow wheelchairs/buggies to pass;
- have gradients no greater than 1:20;
- are located near to settlements and/or central car parking areas;
- have safe access/exit points which are fully accessible, i.e. ramps/dropped kerbs, etc.

On Road Core Paths

Some Core Paths are located along quiet public roads and on roadside footpaths principally within settlements. These are clearly shown by a solid purple line on the Core Paths Maps. This is perfectly acceptable and conforms to national government guidance on Core Paths. These routes have been included to ensure a sufficient linked and integrated Core Paths Network is achieved that meets the needs of a wide variety of users. Care should be taken however when travelling these routes due to the proximity of moving traffic especially at public road crossing points and where there is no roadside pavement.

The River Spey

Core Path can include rivers and lochs. There was considerable discussion previously whether the River Spey should be a Core Path due to its importance as an internationally recognised touring river for paddle sports. The Council considers that designation of the river itself as a Core Path is not necessary as it does not meet all of the agreed Moray Core Path criteria and would bring little added value. It is considered that the river access/egress paths are where the main access issues are which could be resolved through Core Path designation and subsequent management concentrating effort and resources where most needed. In consequence all the access and egress points featured on the Scottish Canoe Association (SCA) website have been designated as Core Paths with the River Spey shown as a Promoted Path reflecting the SCA promotion of the Spey as a major touring river.

As regards other Rivers in Moray, there has been little interest shown from public consultation in Core Paths designation. The River Findhorn is extensively used for more technical pursuits along a short localised section where it is not considered necessary to introduce Core Path status.

CORE PATHS LIST AND ATTRIBUTES

The total length of existing Moray's Core Paths is 634.58km of which 168.06km are on public roads/roadside paths and 466.52km are off road.
