Moray Telehealthcare Involvement Group

Do you have an interest in how technology can support people of all ages to be independent and continue living in their own homes?

Do you want to get involved and ensure the views of service users are heard?

Telecare is technology (alarms, devices, sensors) which can make a real difference to people's lives by promoting independence, enhancing safety and wellbeing. It provides a positive response to a situation – day or night – through the use of equipment and sensors which trigger an alert to quickly summon assistance when certain changes are detected.

An increasing number of older people in Moray and those with long-term health conditions are being supported to live independently through the telecare service. The most well-known form of telecare is the community alarm provided by Moray Lifeline but a wide range of equipment and sensors is available following assessment.

Telecare equipment can reduce risks, offer more confidence to remain at home and bring peace of mind to family and carers.

Current service users and people with an interest in how advancing technology can support care have now come together to form a group.

The involvement group will provide a platform for people to share their experiences, put forward feedback to help improve services and have a greater say in the future direction of telecare in Moray.

New members will be made very welcome by the group.

If you would like to get involved or want to find out more about the group, please get in touch.
