Task Risk Assessment
R.A. No 9 Patching/Resurfacing and Reinstatements

Risk Rating (R)	**LOW**		MED	HIGH	
Hazard	Who/What may be harmed	Initial Risk	R	Mitigation Measures	R
Working near high speed Traffic	Operatives	Vehicle/Vehicle or vehicle/pedestrian collision		On-site dynamic risk assessment at each location. Temporary Traffic Management assessed Operatives trained in setup and removal of TTM and Safety at Street Works and Road Works. Vehicle marked with chevrons, 'Roads Maintenance' and use of 360^{o} amber beacons and diag.610 arrows when in operation. Operatives to wear hi-visibility PPE	
Working with plant	Operatives Public	Heavy machinery with risk of falls, bruising, crushing, death		Only trained competent operators allowed to drive plant with current license. Reversing of plant with trained Banksman only. Charge hand to ensure only competent operators use and work around plant. Operatives to wear hi-visibility PPE	
Working with hot bitumous materials	Operatives Public	Fire, Burns, noxious hot vapours and fumes		Operative to be deemed competent. When bitumen is hot, it produces fumes. These must not be inhaled as they can be harmful to your health. If bitumen is used in the open air, the risk is very low, however correct PPE including gloves and vapour mask to be worn. Only essential personnel allowed within work site.	
Lifting and carrying materials and equipment	Operatives	Sprains, strains, cuts, slips, trips and falls		All operatives to receive manual handling training. Use mechanical aids where possible.	
Working near overhead services	Operatives Public	Electrocution, burns and death		Follow SSoW 4.7.7 Avoiding danger from overhead services. All work to be carried out in compliance with the HSE Guidance Note GS6. Brief all staff involved as to expected overhead services prior to work starting.
